

To FCC,

Thank you for allowing comments on RM-10209. I would appreciate the passage of this request/filing. I as a emergency volunteer during the terrible weather/disasters that occur, it would be quite useful to have another option when the propagation on 75m with WX4PTC (National Weather Service at Peachtree City, Ga.) is not there. 40m suffers from popular use and crowding, but most of all the interference from the foreign broadcasters splattering. Again thank you for your consideration in this matter. It will definitely help to have this option for ARES.
